Pin layout: IEC 60947-5-2

Pin	Signal	Definition	Standard
1	L+	24 V	IEC 61131-2
2	I/Q	Not connected, DI, or DO	IEC 61131-2
3	L-	0 V	IEC 61131-2
4	Q	"Switching signal" (SIO)	IEC 61131-9
	C	"Coded switching" (COM1, COM2, COM3)	IEC 61131-9

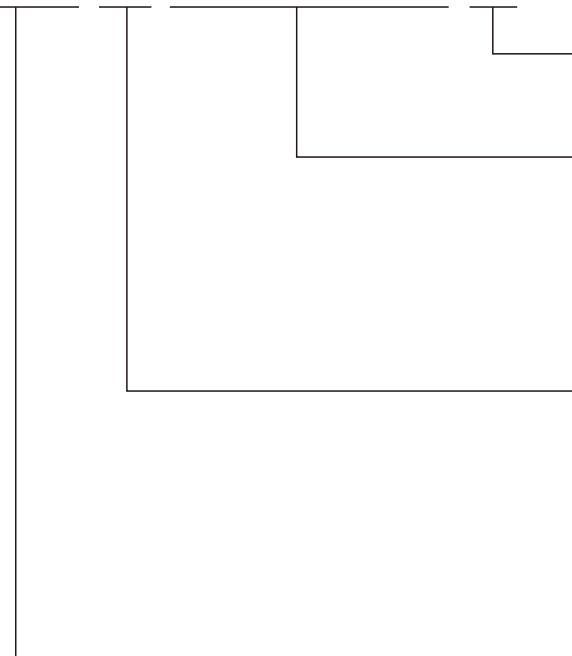

- IO-Link is the world's first standardized I/O technology for communication with sensors and actuators (IEC 61131-9)
- No additional requirements for cable materials are required, and the conventional 3-wire connection method can achieve powerful point-to-point communication
- IO-Link is not a fieldbus, but a further development of classic sensor and actuator connection technology

DH Bus

- DEGSON High performance Bus
- DEGSON internal communication protocol for efficient remote extension modules
- DH Bus single link can extend up to 16 modules, with a maximum length of 120m, and adjacent stations with a maximum length of 15m
- The last DH Bus station needs to increase terminal resistance to ensure stable and reliable communication
